(a)
$\mathcal{F}/E_0^2$ (at $kz = 0$)
$\omega t/\pi$
crosses zero
(twice per period)
linear co-polarised, Eq. (11)
circular co-rotating, Eq. (13)
(b)
normalised value
N (coherent beams)
slope +1/2
slope −1
$\mathcal{E}_{\rm in}/\mathcal{E}_{\rm ref} = 1/N$
$E_{\rm peak}(N)/E_{\rm peak}(1) = \sqrt{N}$
